Roman Stepaniuk

Front End Developer

I've been in IT for more than 2 years, more than 1.5 years doing frontend development of commercial projects. Last year I have been actively developing web applications (React and Next.js).
In all that time, I've managed to work independently as a freelancer and I've worked for a small company.
In 2023, I entered the university to study Computer Science and Information Technology. Now I am continuing my education at this university, deepening my knowledge and skills in programming, system administration, cybersecurity, and data analysis. My studies include both theoretical courses and practical laboratory work, which help me develop critical thinking and solve real-world technical problems. I am actively involved in project work, hackathons, and student conferences, which allows me to broaden my professional horizons and create useful connections in the IT community.

WORK EXPERIENCE

Freelance(Fullstack) 02/2024 – 04/2024

- Developed interactive user interfaces using a component-based approach to ensure scalability and code support.
- Managed application state to ensure efficient and predictable user interface behaviour.
- Created Docker files and configured Docker Compose to work with multi-service architectures.
- Ensured effective communication with clients to achieve the required results on time and in accordance with project specifications.

SD-Company(Front End Developer) 09/2023 – 02/2024

- I created the company's main website, developed its functionality, maintained it and optimised it.
- Worked on improving the site's SEO, integrating third-party APIs, and ensuring cross-browser compatibility
