Stepaniuk Roman

Front-end Developer

I've been in IT for more than 2 years, more than 1.5 years doing frontend development of commercial projects. Last year I have been actively developing web applications (React).

In all that time, I've managed to work independently as a freelancer and I've worked for a small company.

In 2023, I entered the university to study Computer Science and Information Technology. Now I am continuing my education at this university, deepening my knowledge and skills in programming, system administration, cybersecurity, and data analysis. My studies include both theoretical courses and practical laboratory work, which help me develop critical thinking and solve real-world technical problems. I am actively involved in project work, hackathons, and student conferences, which allows me to broaden my professional horizons and create useful connections in the IT community.

Work Experience

09.2023-02.2024/ SD-Company

My responsibilities included creating the company's main website, developing its functionality, maintaining its operation, and optimizing it.

02.2024 - 04.2024 / Freelance

Worked as a freelancer, creating dynamic and high-performance web applications. Main responsibilities included developing interactive user interfaces using a component-based approach to ensure high reusability and code maintainability. Managed application state to ensure efficient and predictable user interface behavior. Created Docker files and configured Docker Compose to work with multi-service architectures. Ensured effective communication with clients to achieve required results on time and according to project specifications.
